Skin and Sun Protection Policy

SKIN PROTECTION RATIONALE
The Skin Protection Policy is implemented to educate the school community about the risks of excessive UV radiation exposure and to have structures which minimise risks of skin cancer.

Australia has the highest incidence of skin cancer in the world, with two out of every three people developing some form of skin cancer before they are 85. Skin damage, including skin cancer, is the result of cumulative exposure to the sun. Sun exposure in the first 10 years of life determines, to a substantial degree, the likelihood of skin cancer developing later in life.

The Cancer Council of SA advises people to protect their skin at times when the ultraviolet (UV) radiation level is 3 and above - this is when it is strong enough to cause damage to unprotected skin. For much of South Australia, UV radiation levels are 3 and above every day from August to April and it is during these months that sun protection is necessary.

The Cancer Council of SA recommends that a skin protection policy be in place all year round but especially from the 1st August until the 30th April when UV radiation levels are 3 and above. It is highly recommended that UV radiation levels are monitored, particularly during May as they still may be 3 or above depending on your location.

It is important to balance sun protection with safe sun exposure for the production of vitamin D for bone growth and development.

AIMS
The aims of the St Joseph’s School Skin and Sun Protection Policy are to promote among children, staff and parents:
- positive attitudes towards skin protection.
- lifestyle practices which can help reduce the incidence of skin cancer and the number of related deaths in the wider community.
- personal responsibility for and decision making about skin protection.
- awareness of the need for environmental changes in our school to reduce the level of exposure to the sun.

IMPLEMENTATION
This policy is to ensure that all members of our primary school are protected from skin damage caused by the harmful rays of the sun. It is an expectation that all staff, students and parents of St Joseph’s School will use the following skin protection strategies and is for implementation throughout the whole school year.

- Students, staff and volunteers will be expected, and visitors to our school will be actively encouraged, to wear a broad brimmed or legionnaire style hat whenever they are involved in outside activities. Children not wearing an appropriate hat will be expected to sit in a shaded area. NO HAT! NO PLAY!
- The shade of trees, pergolas, verandas, umbrellas and school tents will be used and its use actively encouraged by staff.
- Students will be encouraged to wear shirts with collars and longer style shorts or shirts.
- Students, staff and volunteers will be expected, and visitors to our school will be actively encouraged to wear appropriate clothing that protects the skin.
Whenever possible, all outdoor activities will be scheduled outside the daily sun protection times, conducted indoors or in the shaded areas of the school. Daily sun protection times can be sourced from the Bureau of Meteorology via www.bom.gov.au/sa/uv or the SunSmart app for mobile phones or widget via https://www.cancersa.org.au/cut-my-risk/sunsmart/resources/sunsmart-app-and-widget. Staff and parents are welcomed and encouraged to download to their phones for daily use and up-to-date information about UV radiation levels.

Parents/Carers will be encouraged to ensure their child/ren apply a broad-spectrum, water resistant sunscreen with an SPF of 30+ to clean, dry skin in the morning prior to the child coming to school.

Parents will be encouraged to supply sunscreen for their children, although there will be bulk sunscreen packs available in all classrooms and the staffroom.

When at school sunscreen should be applied 20 minutes prior to going outdoors and reapplied every two hours if outdoors for a prolonged period of time (ie sports days, excursions, camp) or more frequently if involved in water activities or perspiring.

Staff will be encouraged to role model appropriate SunSmart strategies; this includes the wearing of hats and applying sunscreen whilst on yard duty or conducting any outdoor lessons and/or activities.

Staff will reinforce the SunSmart message in the curriculum of all year levels and during school activities and in general school procedures eg newsletters, assemblies etc so that the staff, parents and entire school community are informed of the policy.

Staff will educate students about sun protection, Vitamin D and to be SunSmart and to take personal responsibility for their own skin protection.

Information about the school’s SunSmart Policy will be given to all new staff, students and families.

The St Joseph’s School Skin Protection Policy will be reviewed on a 3 yearly basis to ensure that the information remains current and relevant.

Policy issues will be discussed with staff, SRC and St Joseph’s School Board.

SUN PROTECTION RATIONALE
At St Joseph’s School;
Children are expected to wear the approved school brimmed hat when out-doors. This includes Physical Education lessons, fitness, play times, sports days and camps and excursions. Children without a hat will be excluded from the activity and will remain in shaded area. Staff are also expected to wear an appropriate hat outdoors. Whenever practical Physical Education lessons, fitness and activities will take place outside high risk UV times.

Sun protection and skin cancer prevention programs are incorporated into the curriculum at all year levels in particular, at the start of Term 1,3 and 4, children will be reminded about the importance of wearing hats and sunscreen.

St Joseph’s School is a registered SUNSMART School.
